

SERVICES - Power Transmission & Power Distribution

We supply comprehensive product-related and value-added services for power transmission systems. Our services keep the grid infrastructure on the cutting edge in terms of sustainability, reliability, security, efficiency, environmental friendliness and business value.

- Design, supply, installation and commissioning overhead power lines (Transmission Towers)
- Air Insulated (AIS) and Gas Insulated (GIS) circuit breakers
- High-voltage products and switchgears
- High-voltage direct current (HVDC) transmission systems
- Power Transformers (400/132 KV, 132/33KV)
- Designing, supply, manufacturing and installing of mobile sub-station (400/132KV, 132/33KV)
- SCADA and controlling systems for power lines and substations

We are a leading provider of Medium Voltage equipment, provides high quality transmission lines and sub-stations, we are aware that the key elements for building a smarter grid are sustainability, consumer satisfaction and operational efficiency.

- Power Transformers (33\11 KVA)
- Designing, supply, manufacturing and installation of mobile sub-station (33\11 KVA)
- 11 KV transmission towers
- Distribution Transformers (50 – 2500 KVA)
- Circuit Breakers (all types and models) 33KV – 11KV
- Substations SCADA systems
- Operation and maintenance
